Professional Summary

Final-year Artificial Intelligence engineering student with experience developing AI-powered applications, machine learning workflows, and research-oriented intelligent systems. Skilled in building scalable solutions involving backend engineering, real-time systems, and AI-driven application development with a focus on practical and impactful implementations.

Education

B.Tech in Computer Science and Engineering (Artificial Intelligence) <i>Amrita Vishwa Vidyapeetham, Coimbatore, Tamil Nadu</i> CGPA: 7.28 / 10	2023 – 2027
Higher Secondary Certificate (CBSE) <i>The Ashok Leyland School, Hosur</i> Percentage: 90%	2022 – 2023
Secondary School Certificate (CBSE) <i>The Ashok Leyland School, Hosur</i> Percentage: 86%	2020 – 2021

Technical Skills

Languages: Python, C, C++, JavaScript, SQL
Frontend: React.js, HTML5, CSS3, Tailwind CSS
Backend: Node.js, Express.js, REST APIs, JWT Authentication, Socket.IO
Databases: MongoDB, PostgreSQL
AI / ML: PyTorch, TensorFlow, Scikit-learn, NumPy, Pandas
Tools & Platforms: Git, GitHub, Docker, Linux, VS Code, Kaggle, Anaconda
Embedded Systems: Arduino, ESP32, IoT System Development

Projects

HackHub – Real-Time Hackathon Collaboration Platform	Mar 2026
- Built a real-time collaboration platform supporting live communication, notifications, and team coordination workflows. - Designed RESTful APIs with JWT-based authentication and implemented WebSocket-driven event handling using Socket.IO. - Developed an AI-assisted teammate matching module using weighted skill scoring and resume parsing techniques.	
Clinical Data Processing and Summarization System	Feb 2026
- Developed a full-stack clinical data processing system for generating structured medical summaries from large datasets. - Built backend APIs for automated data transformation and AI-driven summarization workflows. - Optimized client-server communication pipelines for scalable request handling and efficient processing.	
Fabric Defect Detection using Computer Vision	Dec 2025
- Developed an automated fabric defect inspection system using computer vision techniques for industrial quality analysis. - Designed a modular workflow with defect localization, confidence scoring, and anomaly detection for fabric defects. - Created a Streamlit dashboard supporting real-time inspection, batch processing, and visual defect analytics.	

Publication

Synergizing Wavelet Scattering Transform and Deep Learning for EEG-Based Depression Classification	May 2026
- Proposed an EEG-based depression classification framework using Wavelet Scattering Transform and CNN architectures. - Achieved 97% balanced accuracy and strong AUC performance on EEG-based diagnostic classification tasks. - Presented at RECCAP 2026 International Conference, IIT Palakkad.	

Leadership & Experience

IETE SF Club – Competitive Programming Vertical	Jun 2025 – Present
- Organized and conducted technical workshops on algorithmic complexity and problem-solving strategies for 50+ students. - Coordinated coding contests and actively participated in weekly competitive programming sessions.
